

## PRODUCT FOR THE ECO-FRIENDLY CONTROL OF MOSQUITO LIFE CYCLES

### Contains polydimethylsiloxane

### Characteristics and areas of use

This product is for residential use in small bodies of still and stagnant water. Once applied, the product forms a thin, silicone film on the surface of the water, which gradually releases polydimethylsiloxane, preventing larvae and pupae from receiving the oxygen they need to develop into maturity. The film also prevents mosquitoes (larvae and pupae) from developing correctly during immaturity. The product uses a physical-mechanical mechanism and is effective for at least 2 to 3 months.

### Dosage

If treating small bodies of water (flowerpot dishes, tyres, etc...) break off 1 block from the slab along the pre-marked lines. In general, 1 block can be used to treat around 0.25m<sup>2</sup>. If you need to treat a larger body of water, use more blocks in proportion to the area to be treated.

Item	Code	Packaging
Aquatain Blocks	1-274-1001-1	35 g tablet (consisting of 8 blocks) in box of 100 tablets
